

Used Parts for Forklift

Used Forklift Parts - Inevitably, lift truck components would eventually wear out and require replacing. The choice of buying brand new components can become pricey so another idea is to buy used parts. This can save a lot of money in the end. It is a great idea to obtain used lift truck components which have been reproduced. These components would guarantee that you are getting components that would work for a long time and be productive.

Remanufacturing broken and worn out parts is a less expensive way overall than rebuilding. With rebuilding parts, only the components which are worn out or broken get changed, which means that other wearable parts might break down soon after purchase.

Remanufacturing however offers the best assurance for used parts. Reproduced parts are taken apart and cleaned and then all wearable pieces are replaced. All wearable parts are replaced regardless of age or wear which is one more reason why remanufactured parts on the whole operate so much better. Whichever part within the part is brand new and this offers much longer life to the used part. Based on the lift truck parts which are being redone, the cleaning process and the complete remanufacturing process would vary.

After complete disassembly, the engines are oven cleaned. Different components of the engine like spark plugs, pistons, rings, valves, valve springs, and filters could be replaced during the remanufacture process. The engines are hot tested after reassembly to guarantee that there are no oil pressure problems, no leaks, noises or any vacuum.

Transmissions are oven cleaned, pressure washed, and disassembled. A comprehensive inspection is done to check for any cracks. Bearings, bushings and seals are all replaced. Typically, the replacement components used on transmission parts meet OEM specifications.

Some components such as torque converters, the alternator, the water pump, steer axles and the starter could acquire longer serviceability after being remanufactured and having all wearable parts replaced. The electronic control in the electric lift truck is maintained by the control card. This particular card can also be remanufactured with replacing all aged and worn out components. Unlike other lift truck parts the control card can only have the worn and aged components replaced.

Parts which are reproduced have to be comprehensively examined upon reassembly to guarantee they are in good condition prior to being sold. When buying these parts, it is a good idea to be certain that they have undergone all of the proper testing and inspections. On certain larger components such as engines, transmissions and steer axles, OEM specification replacement components must be utilized.

The forklift dealer can ensure that the components they have reproduced meet the OEM specifications. This would also guarantee the parts meet industry standards. A lot of details go into remanufacturing used components. This attention to detail provides more serviceability out of remanufactured components than the parts that were only rebuilt.
