

## Carriage Roller

Carriage Rollers - Carriage rollers are particularly designed bearings that are utilized on lift masts so as to help them perform within tough environmental surroundings. Lift masts are often subjected to oscillations, shocks, high dynamic and vibrations and static loads. This equipment is regularly exposed to environmental influences such as heat, dust, cold, aggressive ambient air, moisture and contamination. Hence, the guidance arrangements of lift masts must be specifically robust and have a specific high load carrying capability.

To be able to help compete in many different environmental conditions, carriage rollers were designed for a lot of lift masts. While having the ability to deal with a specifically high load carrying capacity, these bearings provided an economical operational security for the guidance arrangement of the lift masts.
